

LESSON
3.6

Practice B

For use with pages 196–203

What can you conclude from the given information? State the reason for your conclusion.

1. $\angle 1 \cong \angle 2$

2. $n \perp m$

3. $\overrightarrow{BA} \perp \overrightarrow{BC}$

Find the value of x .

4.

5.

6.

7.

8.

9.

Find the measure of the indicated angle.

10. $\angle 1$

11. $\angle 2$

12. $\angle 3$

13. $\angle 4$

14. $\angle 5$

15. $\angle 6$

In Exercises 16–18, use the diagram.

16. Is $r \parallel s$?

17. Is $m \parallel n$?

18. Is $s \parallel t$?

LESSON 3.6 **Practice B** *continued*
For use with pages 196–203

Find the distance from point A to line c. Round your answers to the nearest tenth.

25. Maps A map of a neighborhood is drawn on a graph where units are measured in feet.

- Find $m\angle 1$.
- Find $m\angle 2$.
- Find the distance from point P to line a .
- Find the distance from point P to line c . Round your answer to the nearest foot.

Lesson 3.5, continued

9. a. $AE \neq DB$ b. $-\frac{A}{B} = -\frac{D}{E}, B \neq 0, E \neq 0$

10. a. Your loan: $y = 112 - 8x$; the slope is -8 and represents paying your sister \$8 per week; the y -intercept is 112 and represents the initial amount of the loan.

Your brother's loan: $y = 165 - 13.75x$; the slope is -13.75 and represents paying your sister \$13.75 per week; the y -intercept is 165 and represents the initial amount of the loan.

Your brother will pay off his loan first. From the graph, the x -intercepts of both linear equations represent when you and your brother will pay off your loans. The x -intercept of the linear equation that represents your brother's loan is 12 and the x -intercept of the linear equation that represents your loan is 14. So, your brother will pay off his loan in 12 weeks and you will pay off your loan in 14 weeks. c. You can determine who will pay off the loan first by algebraically determining the x -intercept of each equation. d. The intersection of the two lines represents when you and your brother will owe your sister the same amount of money. e. Yes. After the third week, you have paid your sister \$24 and therefore you have to pay her \$88 more. Because you now want to pay \$11 a week, the equation that represents your loan is now $y = 88 - 11x$. It will take you 8 weeks to pay back \$88.50. So, it will take you a total of 11 weeks to pay off your loan, and you will pay off your loan first.

Problem Solving Workshop: Mixed Problem Solving

- a. Gym A: $y = 20x$, Gym B: $y = 15x$

- No; the slopes are different.
- It costs \$20 per month for a membership to Gym A and it costs \$15 a month for a membership to Gym B.
- $y = 15x + 30$

Yes; It is parallel to the line in part (a) for Gym B because they have the same slope.
